Experiment NO. 5

Naive Bayes

Importing the libraries

```
In [1]:
    import numpy as np
    import matplotlib.pyplot as plt
    import pandas as pd
```

Importing the dataset

```
In [2]: dataset = pd.read_csv('Social_Network_Ads.csv')
X = dataset.iloc[:, [2, 3]].values
y = dataset.iloc[:, -1].values
```

Splitting the dataset into the Training set and Test set

```
In [3]: from sklearn.model_selection import train_test_split
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size = 0.25, random_
```

Feature Scaling

```
In [4]: from sklearn.preprocessing import StandardScaler
    sc = StandardScaler()
    X_train = sc.fit_transform(X_train)
    X_test = sc.transform(X_test)
```

Training the Naive Bayes model on the Training set

```
In [5]: from sklearn.naive_bayes import GaussianNB
    classifier = GaussianNB()
    classifier.fit(X_train, y_train)
```

Out[5]: GaussianNB()

Predicting the Test set results

```
In [6]: y_pred = classifier.predict(X_test)
```

Making the Confusion Matrix

```
In [7]: from sklearn.metrics import confusion_matrix
cm = confusion_matrix(y_test, y_pred)
print(cm)

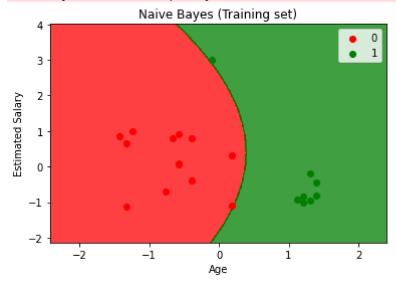

[[3 0]
    [0 5]]
```

Visualising the Training set results

```
In [8]: from matplotlib.colors import ListedColormap
        X set, y set = X train, y train
        X1, X2 = np.meshgrid(np.arange(start = X_set[:, 0].min() - 1, stop = X_set[:, 0].ma
                             np.arange(start = X_set[:, 1].min() - 1, stop = X_set[:, 1].ma
        plt.contourf(X1, X2, classifier.predict(np.array([X1.ravel(), X2.ravel()]).T).resha
                     alpha = 0.75, cmap = ListedColormap(('red', 'green')))
        plt.xlim(X1.min(), X1.max())
        plt.ylim(X2.min(), X2.max())
        for i, j in enumerate(np.unique(y_set)):
            plt.scatter(X_set[y_set == j, 0], X_set[y_set == j, 1],
                         c = ListedColormap(('red', 'green'))(i), label = j)
        plt.title('Naive Bayes (Training set)')
        plt.xlabel('Age')
        plt.ylabel('Estimated Salary')
        plt.legend()
        plt.show()
```

c argument looks like a single numeric RGB or RGBA sequence, which should be avo ided as value-mapping will have precedence in case its length matches with *x* & *y*. Please use the *color* keyword-argument or provide a 2-D array with a single row if you intend to specify the same RGB or RGBA value for all points.
